Timber Windows
can be repaired at
a fraction of the
cost of
replacement

Repair Care - Achieving Best Value.

Repair Care International Ltd has always been committed to providing the best and most cost effective system for repairing and maintaining wooden windows and all aspects of external joinery.

We have now improved this service by developing a network of highly trained and committed Specialist Contractors to deliver the quality of workmanship and professionalism now demanded by architects, surveyors and property managers.

The Repair Care Commitment –

- Provide the highest quality prior to paint timber repairs.
- Provide high quality certified training in all aspects of Window Care repairs to all on-site contractors.
- Significantly extend the life of both repairs and the paint or wood stain finish.
- Reduce the need for costly window replacement – and the environmental impact of pvc-u alternatives.
- Increase productivity – Window Care repairs are quick and make efficient use of contractor's time.
- Involvement in joint site visits – before – during and on completion of each project.
- Minimise disturbance to tenants – most window repairs can be completed in-situ without removing the glass.
- All Window Care products are solvent free and virtually odourless.
- Eliminate repairs defects and associated paint failure.
- Work together with the Specialist Contractors to establish the standard of repairs & the costs at the beginning of each project.

Window Care Systems is the brand name of Repair Care International Ltd:
Unit E Sawtry Business Park, Glatton Road, Sawtry, Huntingdon, Cambs PE28 5GQ
Tel: 01487 830311 Fax: 01487 832876 Email: sales@window-care.net

Repair Care Specialist Contractors are trained to carry out effective site inspections, to identify & quantify areas of rot & decay. Specify the most effective and economic repairs and then carry them out to the highest standards.

Areas of rot and decay are routed out establishing a clean, sound substrate.

To ensure positive adhesion the repair is then primed and Window Care Dry Flex is applied to provide a durable – flexible repair.

On larger repairs Dry Flex is used with new timbers to reduce costs whilst still delivering high quality repairs.
